Analyze: Ex-ante Gender Impact Assessments

MAY 28, 2026

Lauren Keating (FAD, IMF lkeating2@imf.org)

The views expressed in the presentation are those of the author(s) and do not necessarily represent the views of the IMF, its Executive Board, or IMF management

Recall: Four Principles of Gender Budgeting

Recall: Principle of Analyze

Four Principles

Prioritize

Key Budget Institutions

- National and sectoral plans
- Budget call circular/guidance
- Annual/Medium-term Budget Frameworks

Gender Budgeting Practices

- National or Sectoral Gender Equality Goals and Indicators
- Budget circular with a gender lens
- Gender equality informs annual and/or medium-term budget framework

Map

- Budgeting structure for tagging
- Financial tracking

- Gender tagging
- Gender lens on budget execution

Analyze

- Ex-ante policy, program, and project analysis
- Spending reviews
- Ex-post policy, program, and project evaluations

- Ex-ante gender impact assessments
- Gender perspective in spending reviews
- Ex-post gender impact assessments

Report

- Budget documentation
- Financial monitoring and reporting
- Performance monitoring and reporting
- External audits
- Legislative Oversight

- Gender budget statement
- Gender perspective in budget execution reports
- Gender perspective in performance reports.
- External gender Audits
- Legislative oversight (on gender equality)

Outline

I. Introduction to Ex-ante GIAs

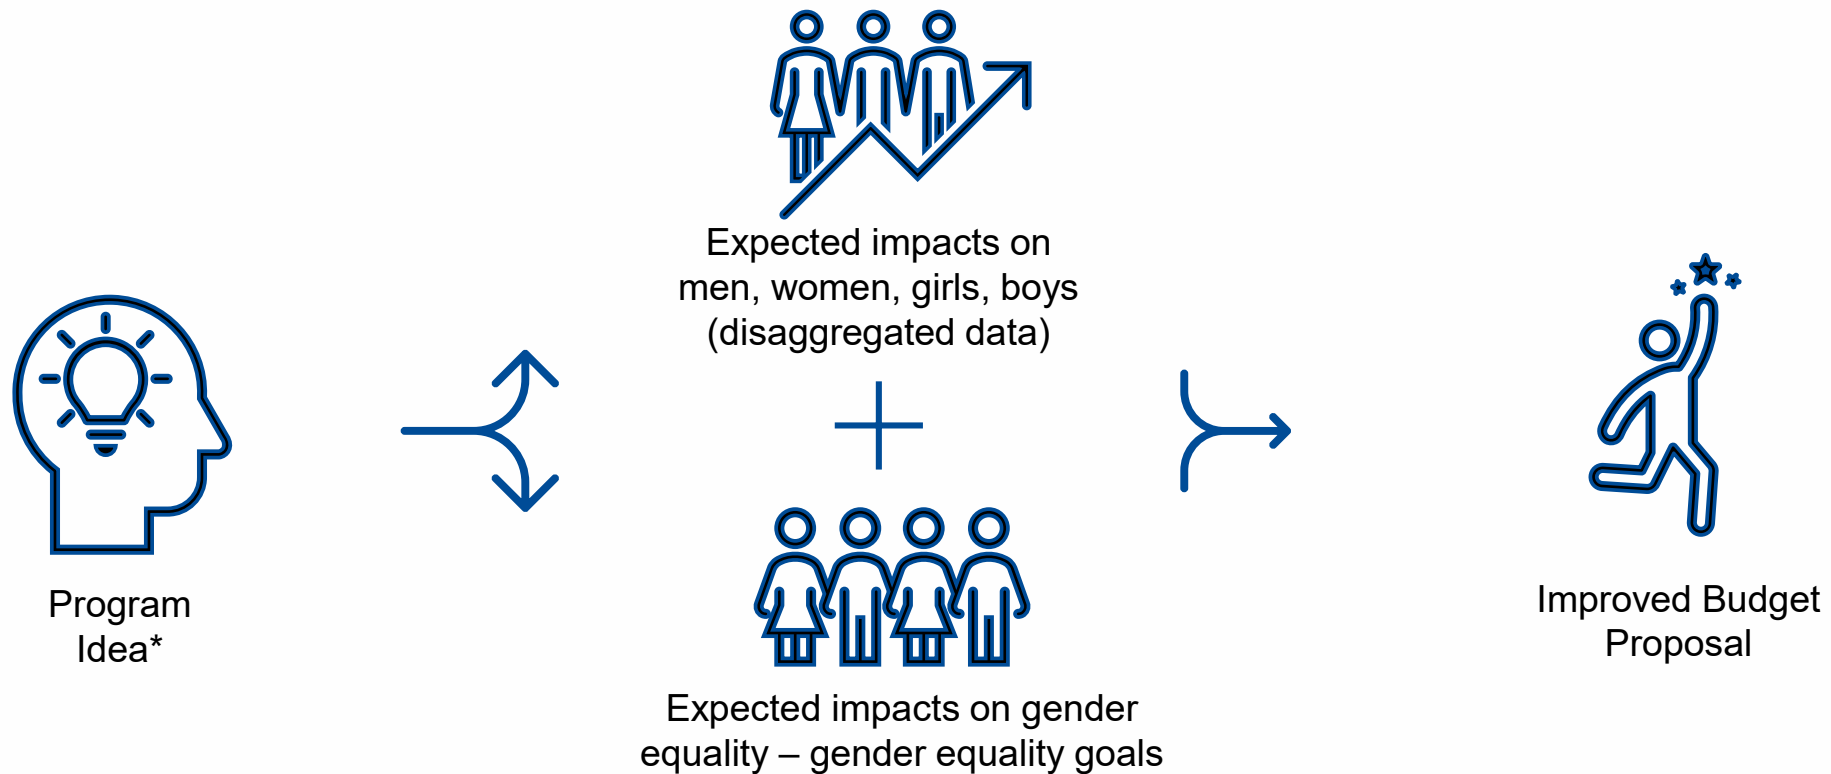

II. Steps for Conducting

III. Country Practices

IV. Data Considerations

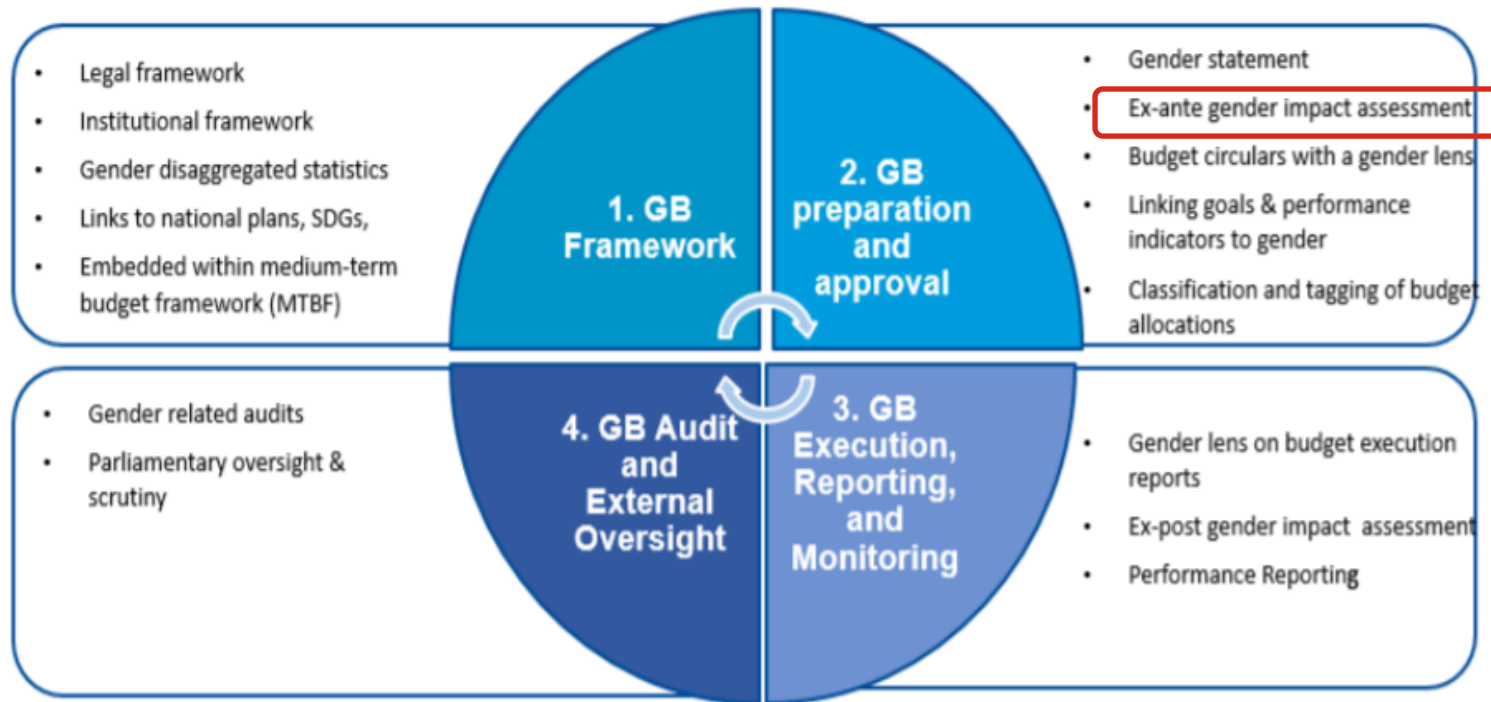

Ex-ante GIA Defined

An assessment of the potential impact of a budget measure on gender equality so the measure may be adjusted whenever possible to ensure gender equality is being advanced, or not undermined, before including it in the budget.

*Most often conducted on programs, sub-programs, or activities which aren't explicitly designed to advance gender equality.

Ex-ante GIA in the Budget Cycle

Source: Gender Budgeting in G20 Countries, IMF WP 2021

Conducted:

- *Early in the budget cycle.*
- *At program development stage.*
- *By government officials closest to the program.*

Submitted:

- *Alongside associated budget proposal.*

Challenged:

- *As part of the budget challenge function (MoF).*

Informs:

- *budget negotiations and prioritization/decision making.*

Examples - Influencing Budget Program Design

Iceland – Infrastructure Stimulus

- Infrastructure stimulus spending projects were expected to disproportionately benefit men yet the same amount of men and women were unemployed as a result COVID-19.
- Ex-ante GIAs of COVID-19 response measures resulted in the Ministry of Finance considering other measures to support women heavy industries in the short term (culture, hospitality) while considering longer term options.

Canada - Supporting Employee Ownership Trusts

- Data from the United Kingdom suggests that EOTs may be more likely to form in sectors with above average compensation, such as the professional, scientific and technical services, construction, and manufacturing sectors.
- As a result, a qualifying condition was added. In order to benefit from any tax changes, an EOT is required to ensure a broad subset of employees, including part-time employees, are included as beneficiaries. These latter employees are more likely to be younger, women, and have lower incomes.

Andalucía - Fiscal Consolidation

- In 2008/2009 and 2013 Andalucía's economy was hit, with high unemployment. Gender impact assessments conducted on spending adjustments found that childcare services were critical for women's labor force participation.
- As a result, allocations to childcare services were not cut but were maintained or increased to support poorer families, especially single mothers.

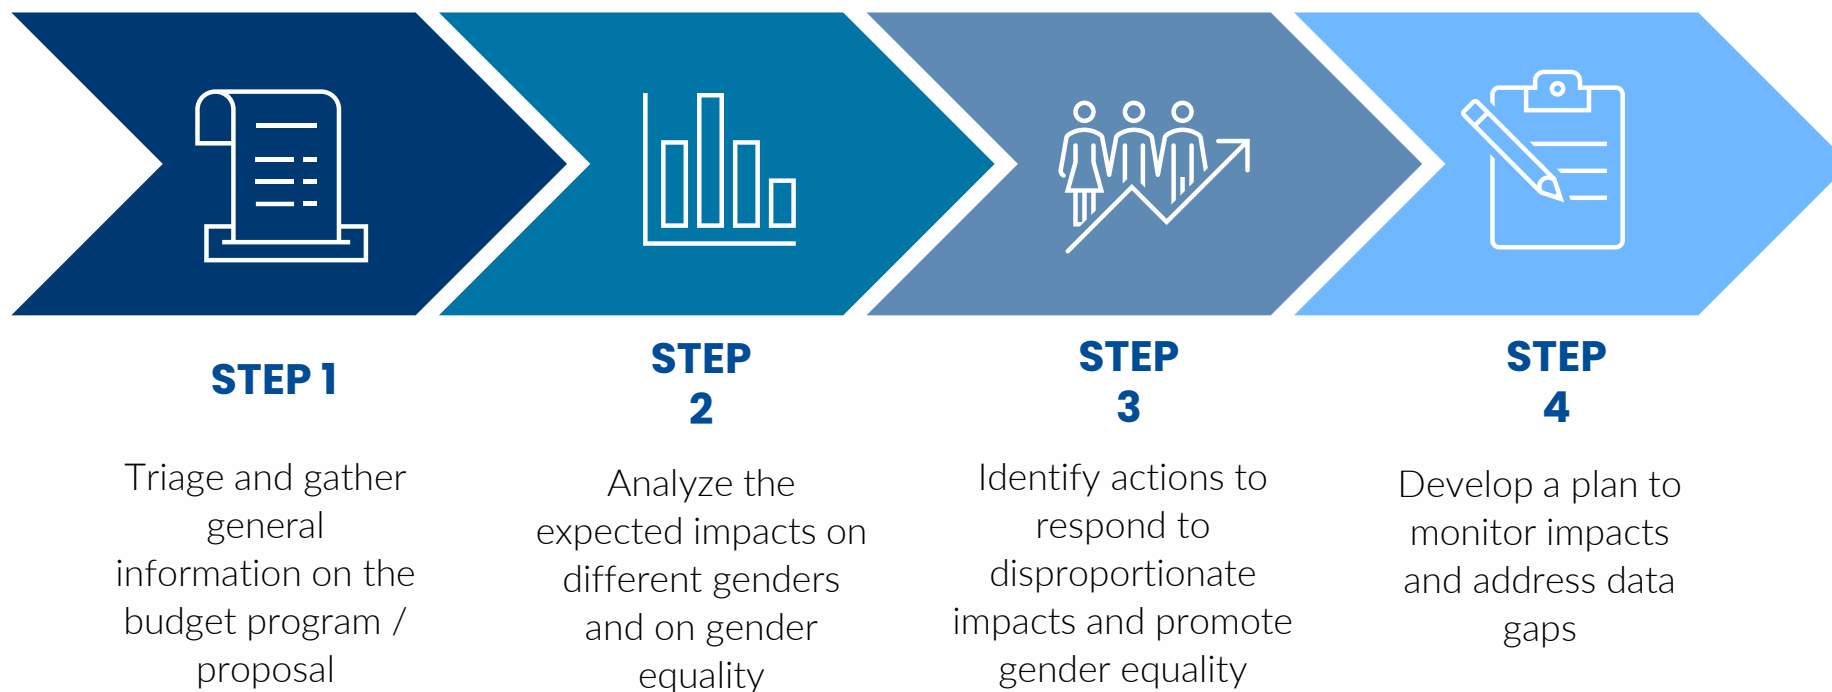

Sweden - Universities Commissioned by the Government

- A gender impact assessment on research funding found a much larger percent went to researchers who are men despite the fact the university commissioned by the government had more women researchers and women professors.
- As a result, the criteria for awarding the funding for research was changed to so that each gender received proportionate to their representation in the university.

II. Steps for Conducting an Ex-ante GIA

Common Steps in Conducting an Ex-ante GIA

A questionnaire meant to guide the assessor

Examples: [Iceland](#), [Spain](#), [Canada](#)

Common Steps in Conducting an Ex-ante GIA

STEP 2

2.a) Analyze the expected impacts on different genders (women, men, girls, or boys)

- **Direct benefit** - What is the gender ratio of the group which is expected to directly benefit?
- **Indirect benefits** - What is the gender ratio of the group which is expected to indirectly benefit?
- **Direct or indirect negative impacts** - Is a group expected to be negatively affected directly or indirectly? e.g., financial or non-financial (by increasing women's time burden). What is the gender ratio?

2.b) Analyze the expected impacts on gender equality

- What conclusion can be drawn after examining the position of the genders impacted from this proposed program?
 - Are the benefits of the program equally distributed between men and women? If not, why is that?
- What are the overall expected impacts on gender equality?

STEP 3

3. Identify actions to respond to disproportionate impacts and advance gender equality

- If the program or activity is expected to perpetuate or increases an existing inequality:
 - What adjustments can be made within the parameters and funding requested so it promotes equality?
 - Are there alternative activities proposed or already in place which are addressing the inequality identified?

Example –Small and Medium Sized Enterprises

STEP 1

Budget proposed program: Funding to support small and medium sized enterprises.

Does this program directly or indirectly affect people? Yes, business owners, employees, communities.

Target group: Small and medium sized enterprises.

Directly beneficiaries: Owners of small and medium sized businesses.

- **Gender ratio:** Disproportionately men. Country dependent but worldwide women make up only 36% of SME owners.

STEP 2

Indirectly beneficiaries: Employees of small and medium sized businesses

- **Gender ratio:** Dependent on country data availability..

Expected impact on gender equality:

- If men are expected to disproportionately benefit from this funding and there is nothing in the program design to increase the representation of women business owners, then this funding could reinforce an existing gender inequality in ownership over assets. A very common gender inequality.

Example –Small and Medium Sized Enterprises

STEP 3

Response to disproportionate impacts/impacts on gender equality:

- Training for women interested in starting a business.
- Target funding for micro-enterprises where women are concentrated.
- Consider informality.
- Network to connect women entrepreneurs with mentors
- More favorable funding for women entrepreneurs in male dominated industries.

STEP 4

How will impacts be monitored?

- Plan for the ministry responsible to collect gender disaggregated data on recipients of the subsidies.

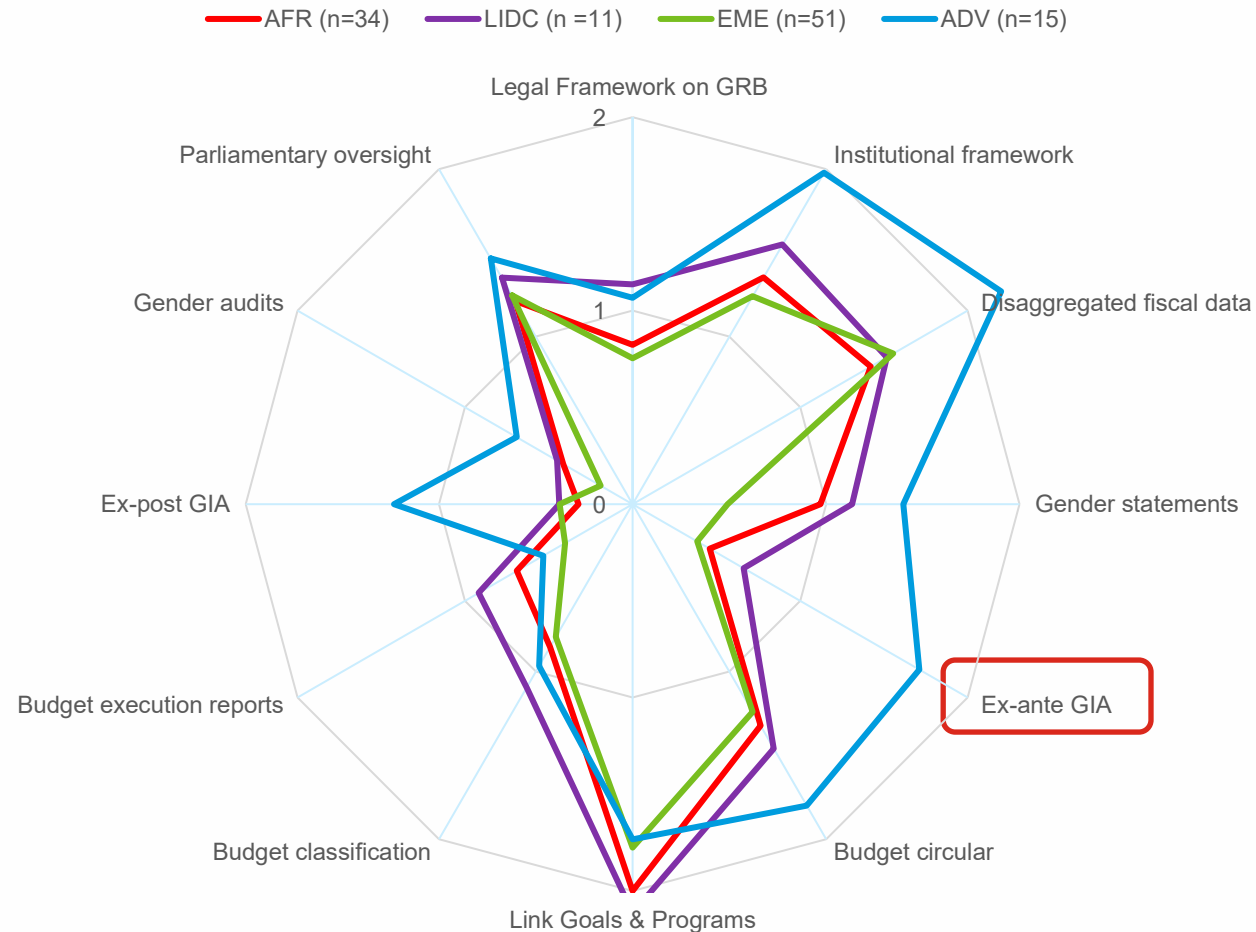

Are there any data gaps? Can these be addressed?

- Data gap on gender of those employed in SMEs.
- Plan to work with the bureau of statistic to capture this data in an enterprise survey.

III. Country Practices

A Global Picture of Gender Budgeting

Gender Budgeting Practices – AFR vs. Other Countries by Income Groups

Country Example – Philippines

- Ex-ante focused.
- A set of questions to guide the analysis can be adapted to specific sectors.
- Strong quality control function by the Philippines Commission of Women.

Box 4. Gender analysis guide questions at the project identification stage

Analysis of gender roles, perspectives, and needs

- ☒ What is the division of labor between women and men?
- ☒ What are the practical gender needs of women and men that the project can address?
- ☒ What are the strategic gender needs of women that the project can address?
- ☒ What are the gender gaps or inequalities arising from the existing gender division of labor?

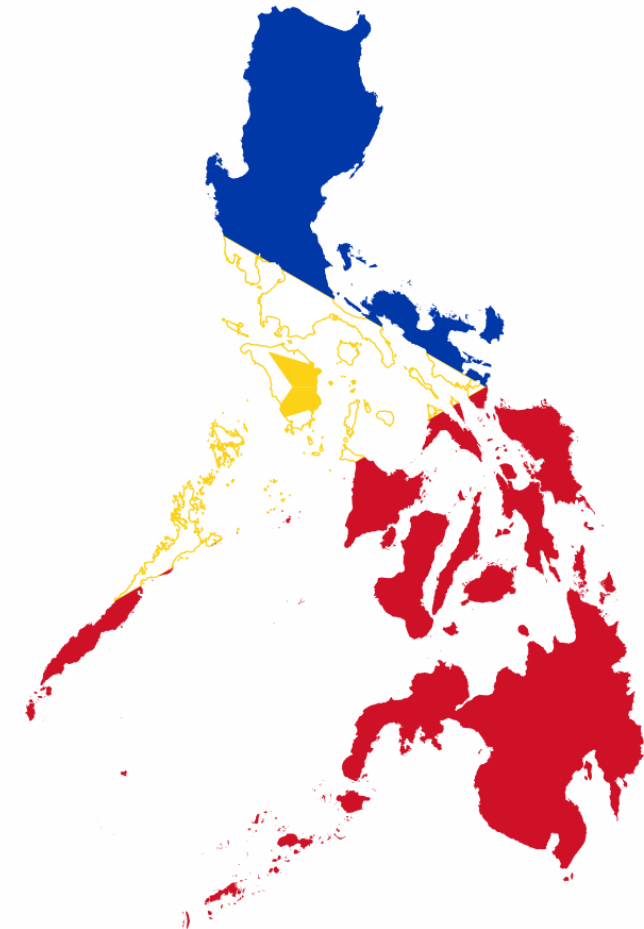

Analysis of access to and control of resources and benefits

- ☒ What resources are available to women and men?
- ☒ What resources do women and have control over?
- ☒ Who has access to and control over the benefits derived from the resources?
- ☒ What are the gender gaps or inequalities arising from the existing resource access and control profile? What contributes to the perpetuation of these gaps? Or, what are the key constraints to women's access to resources and benefits?

Analysis of constraints and opportunities

- ☒ What are the constraints related to women's participation in the project? To attaining the project's gender equality objectives?
- ☒ What are the opportunities related to the achievement of the project's gender equality objectives?

It must be noted that the same questions may be posed for sector or macro situation analysis using aggregate statistics (labor force, employment, credit distribution, education and training, health and nutrition, and the like).

Country Example - Georgia

Conducted for legislative amendments and new acts – not incorporated into the budget process yet.

The GIA methodology was developed by the [International School for Economics TSU](#), based on EIGE, and training and support is provided by external international experts.

a) Gender-sensitive analysis: Understanding the current gender context

Gender-sensitive analysis should be able to answer to following questions:				
Is there evidence about the nature of the problem?	How will it impact women and men?	Who will be impacted?	How can the problem be resolved?	Who can resolve the problem?

Country Example - Spain

- Spain's General Budget Law (2021) mandates that GIA be presented in the budget.
- Ministry of Finance and Public Function leads this process.

Guía metodológica *Informe de impacto de género*

Ficha G.0

PREGUNTA DE CONTROL

0. El programa presupuestario se dirige directa o indirectamente a personas

- ☐ Sí
☐ No

En caso afirmativo, rellene las fichas G.1 y G.2. En caso negativo, complete el siguiente

Justifique brevemente por qué el programa no afecta directa ni indirectamente a persona

Escriba aquí (máximo 2.500 caracteres).

Ficha G.2

CATEGORIZACIÓN DEL PROGRAMA *(continuación)*

6. ¿Los resultados previstos del programa tendrán efecto positivo, neutro o negativo sobre la igualdad de género?

- ☐ Positivo
☐ Neutro
☐ Negativo

7. ¿El programa tiene la capacidad de solventar el problema generador de la desigualdad (palanca de cambio) o únicamente consigue amortiguar las consecuencias?

- ☐ Solventar el problema
☐ Amortiguar las consecuencias

IV. Data and Key Considerations

Data and Knowledge Requirements

Gender-disaggregated data sources

National bureau of statistics

- E.g., labor force surveys, demographic and health surveys

Administrative data

- E.g., social transfer administration data, data collected from similar programs

International organization's data portals/surveys:

- The World Bank's [Gender Data Portal](#) or [Living Standards Measurement Survey](#)
- The OECD's [Gender Data Portal](#)
- The ILO's [Statistics on Women](#)
- [UN Women](#)

Resources for understanding gender inequalities

National gender equality strategies

- E.g., [Canada's Gender Results Framework](#)

Academic or international organization's studies

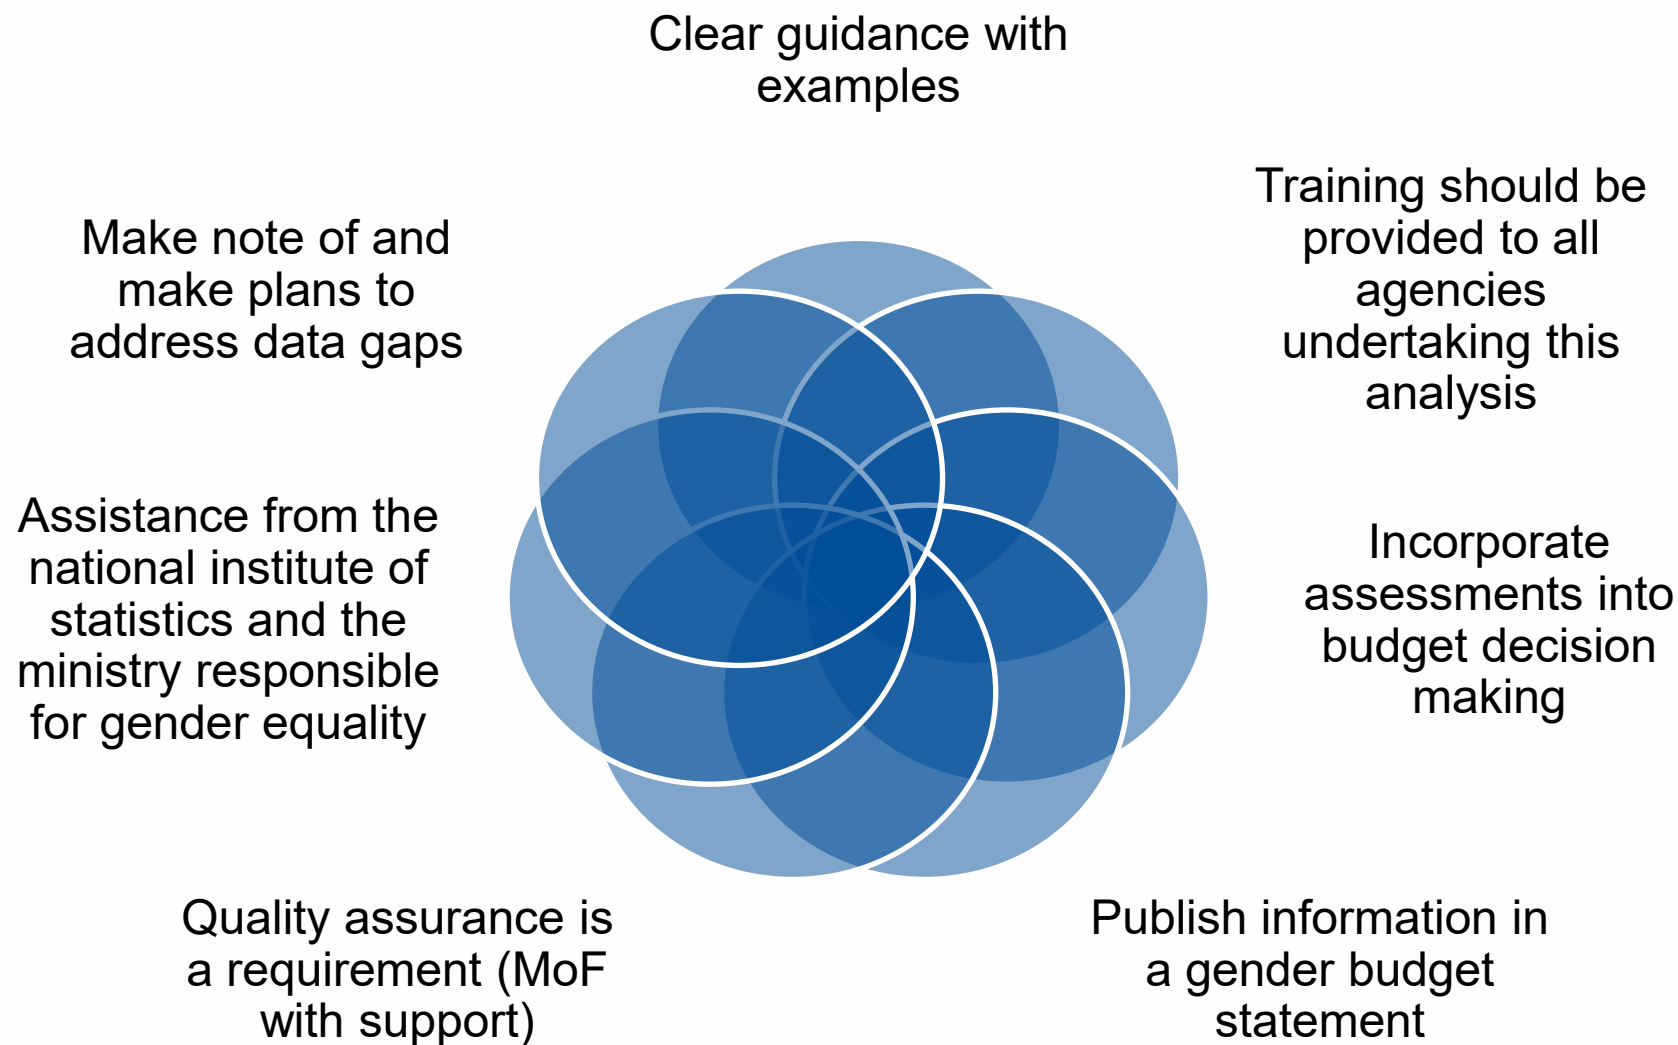

- E.g., an [academic study on gender inequality in Nepal](#)

Sector specific gender inequalities

- E.g., [Philippines HGDH guidelines](#)

If no gender-disaggregated data is available, highlight data gaps and work with the national bureau of statistics to gather data in the program area or sector (focus groups, surveys etc.).

Key Considerations

Thank You!
